

Sunnica Webinar – Environmental Impact Assessments (15/10/2020), answers to unanswered questions

During the webinar it was not possible to answer all of the questions asked. Answers to any unanswered questions are given in this document.

How many adverse visual effects would there be at year 10 of the scheme's operating life?

We haven't undertaken an assessment on this. The Preliminary Environmental Information Report (PEI Report) is based on construction, year 1 and year 15 assessment phases.

Have you produced scene views of the Red Lodge to Worlington road which is proposed to have solar panels on both sides?

We have not produced these views for the Preliminary Environmental Information Report (PEI Report). The scene views (i.e. photomontages) that we have produced for the PEI Report and are consulting on as part of the statutory consultation are those presented here https://sunnica.co.uk/wp-content/uploads/2020/09/SEF-PEIR_Type-4-Visualisations.pdf

Please can you provide images of the visual impact for the area as you leave Isleham village towards Worlington? So the area beyond Sheldricks road. Please can you show both sides of the road, since both sides are within the development plan?

As part of the Preliminary Environmental Information Report (PEI Report) we have produced views from Beck's Road with the junction of Sheldricks Road. These are presented in Figure 10.90 which is available to view at the following link: https://sunnica.co.uk/wp-content/uploads/2020/09/SEF-PEIR_Type-4-Visualisations.pdf
